1. Camera Introduction

Device Overview

M1,M1T are indoor cameras that are compact and can be seamlessly integrated into your home. Loaded with smart features, they can do many things like check the camera live view from everywhere you are. Or send you customized motion alerts. With unbeatable price, they make smart and high-quality home protection accessible to everyone.

Status Indicator

Status Indicator	Camera status
Constant blue	Working properly/ WiFi Connection succeeded
Blue fast flashing	Upgrading
Red flashing slowly	Waiting to connect/ WiFi is not configured
Red flashing fast	Network abnormal/ WiFi connection failed

2. Setup and Installation

Set up the Camera

•What you'll need.

1. Wi-Fi and a working broadband internet connection with at least 2 Mbps upload speed.
2. A phone or tablet with iOS 8 or later or Android 4.2 or later
3. A power outlet

•Power on

Plug the power cable into the Micro-USB power port on the back of the camera, the camera will automatically turn on, wait for the 30s, the indicator light will flash red slowly means boot up is finished.

Tip: Do not move the lens of the camera to force it to rotate after turning it on.

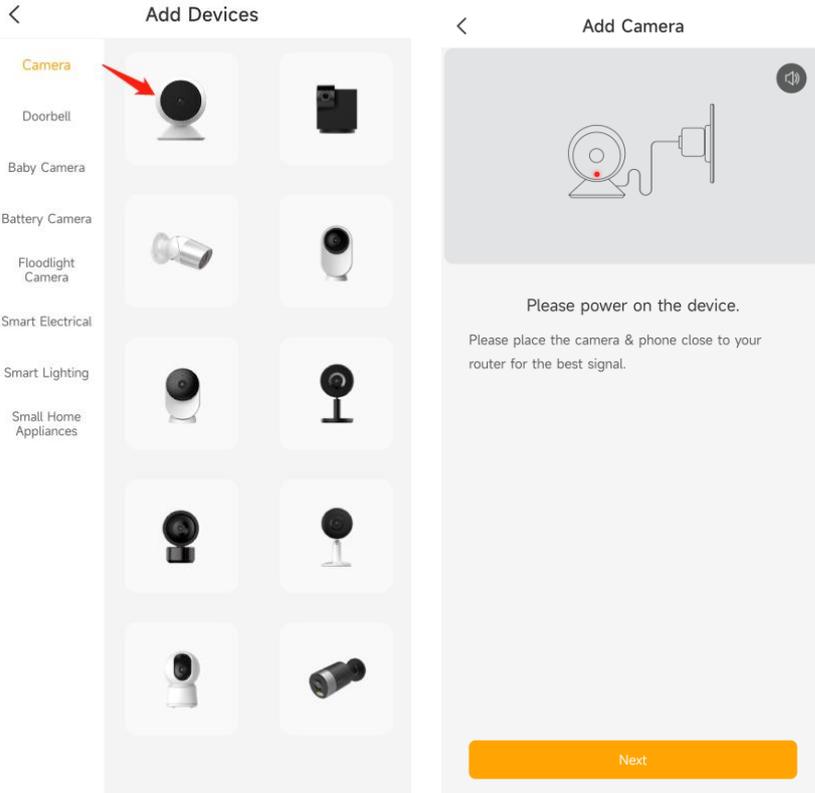

Connect Arenti APP

Scan QR code to download and install the Arenti APP. Also, you can search 'Arenti on App Store (IOS); Play Store(Android). Download and install Arenti APP. Register and log in.

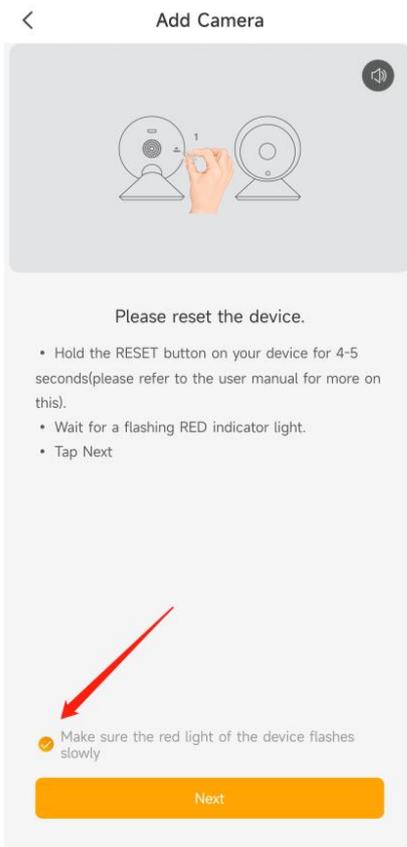

Open the Arenti APP home page, Click '+' at the right top page. Follow the guide on the APP to add the camera.

1. Choose IN1 camera on APP and power on the IN1 camera

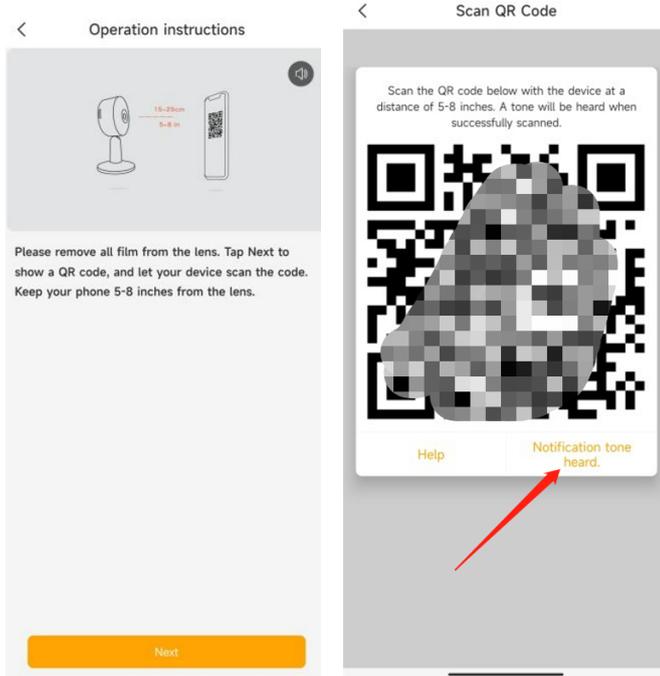

2. Waiting camera boot up around 30s. **Make sure the network indicator red flashing slowly and enable it** . If not please reset the camera, then wait the network indicator red flashing slowly. Then tap 'Next'.

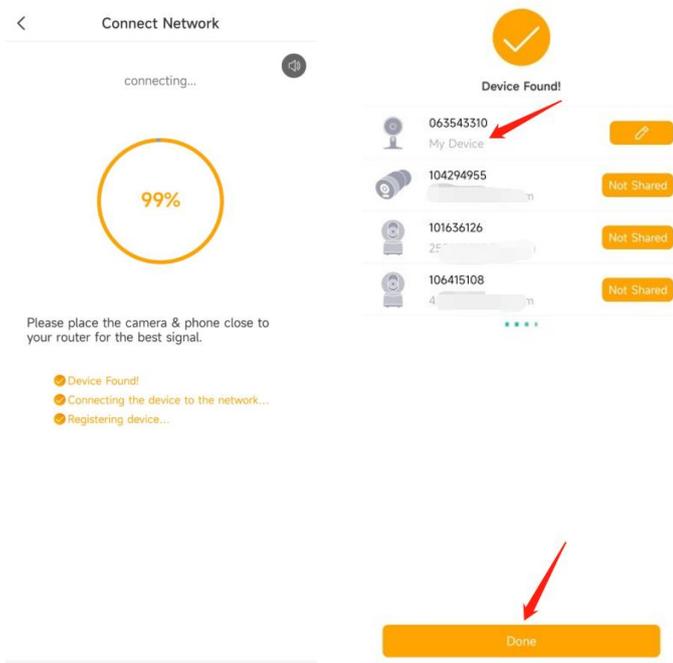

3. Select the wifi you want camera to connect, and input the correct Password. Tap 'Next'.
Note: IN1 only support the 2.4GHz wifi.

4. APP will generate the QR code for camera to scan. Keep your phone 5-8 inches(15-25cm) from the lens . **Please scan the QR code when indicator in red flashing slowly.**
5. A tone will be heard when successfully scanned. Then tap 'Notification tone heard'
After reading QR code, camera get the WiFi information(name/password) from APP QR code, and start to connect the WiFi. **The network indicator will turn to red fast flashing.**

6. Around 30s later, **the camera indicator turns to constant blue, means camera connect the WiFi.** And APP will find the device and add it to APP. Tap 'Done' to finish the process.

Note: When adding the camera, ensure the WIFI network is good, the camera is normally turned on, and the indicator light flashes red slowly. After the connection is successful, the indicator light is solid blue.

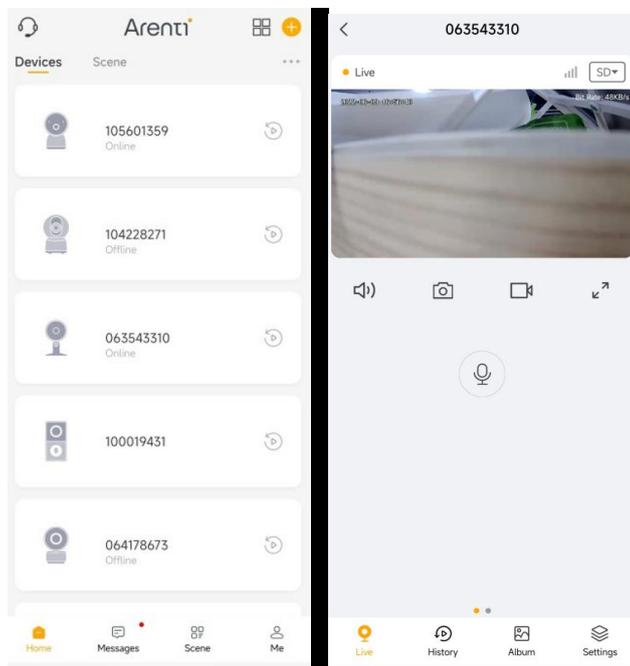

Install the camera

You can put the camera on a flat surface or mount it on the wall.

Installation Precautions:

1. The installation wall needs to be able to bear at least 3 times the total weight of the camera.
2. To prevent injury, the unit must be securely fastened to the ceiling or wall by the installation instructions

Tap  icon to start record the video, tap  to stop the record, the record will save in Album.

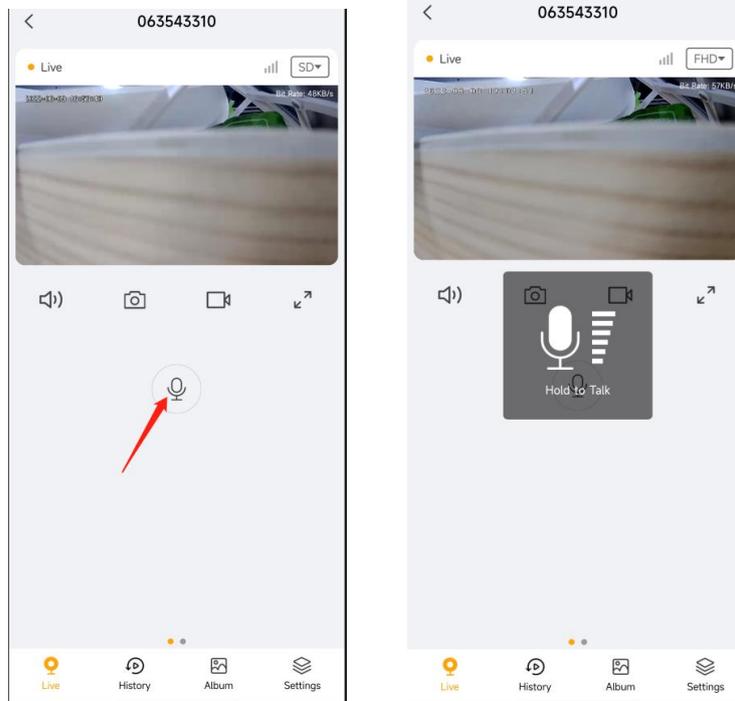

Full Screen

Tap  icon to check the video in full screen.

2-Way Audio

Tap/Press the  icon to talk.

4.Alarm and Detection

About Motion Detection

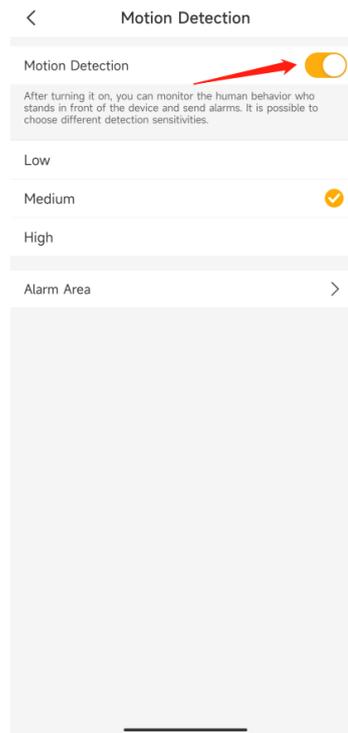

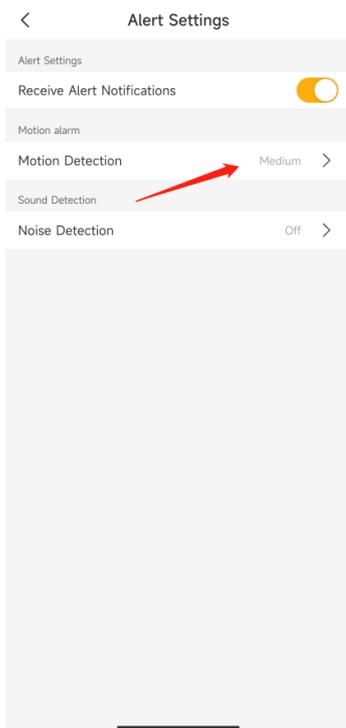

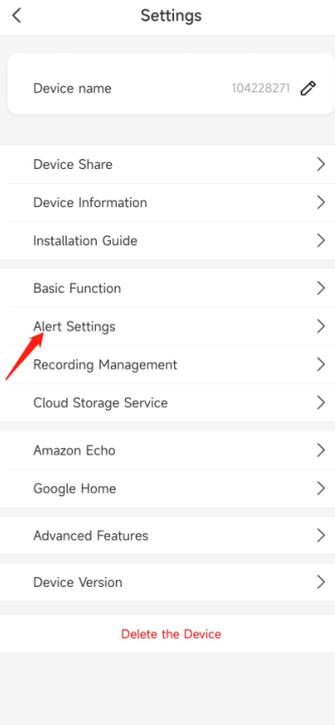

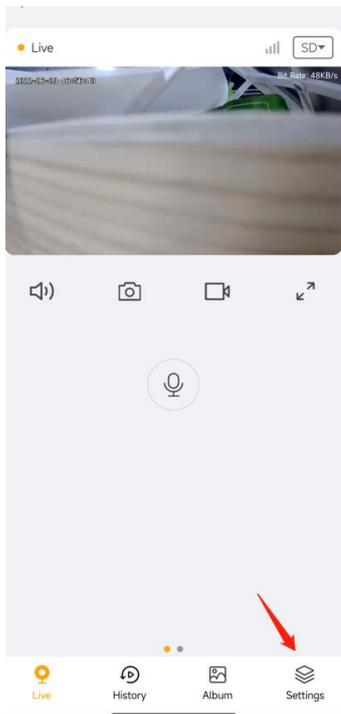

Arenti camera determines whether each macroblock has moved by dividing the grid. When the number of moved blocks reaches a certain proportion of the number of armed blocks, the alarm will start. The working principle of motion detection is that camera will judge it as motion when differences in 2 frames reach 0.5%-10% (customize by adjusting motion sensitivity) of the image. When the picture changes, the number calculated and compared will exceed the threshold and instruct the system to automatically make corresponding process.

Set up Motion detection and sensitivity

Go to camera live video page- Settings-Alert Settings-Motion detection-On

And you can choose and set the motion detection sensitivity.

Note: High-The most sensitive Level, It will detect more motions.

Set up Detection Area

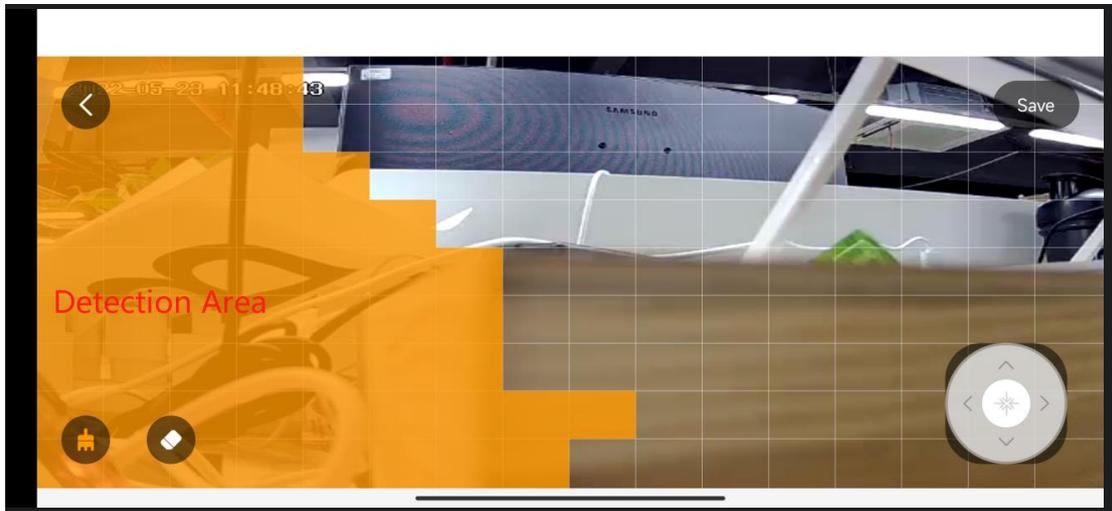

Go to camera live video page- Settings-Alert Settings-Motion detection-Alarm Area

Tap the  icon to choose the area you want to detect.

Tap the  icon to erase to yellow area that you don't want to detect.

Tap 'Save' to save the Detection area settings.

Note: Camera will only detect the motion in yellow area.

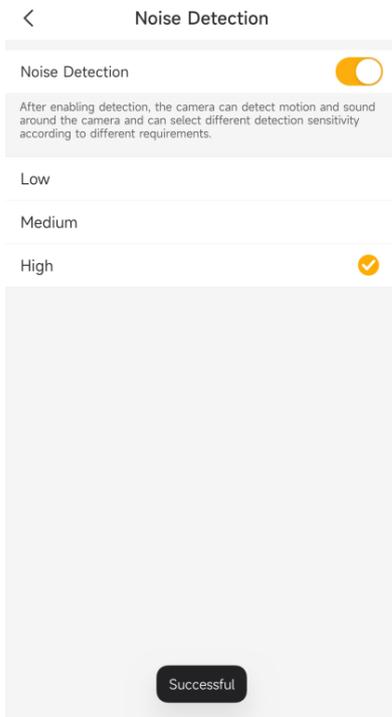

Set up Noise Detection and Sensitivity

Go to camera live video page- Settings-Alert Settings-Noise detection-On

And you can choose and set the noise detection sensitivity.

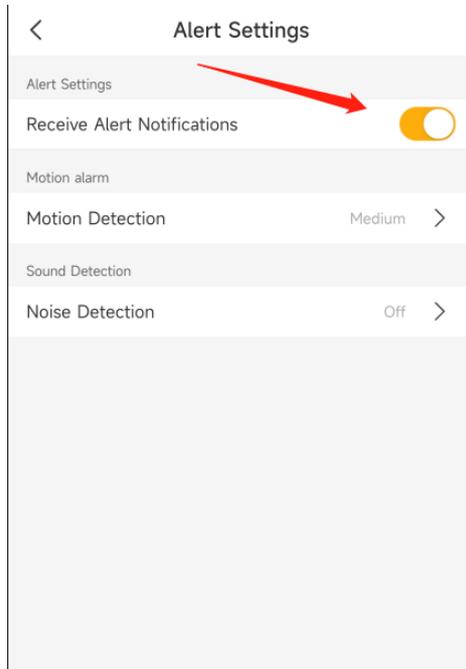

Note: High-The most sensitive Level.

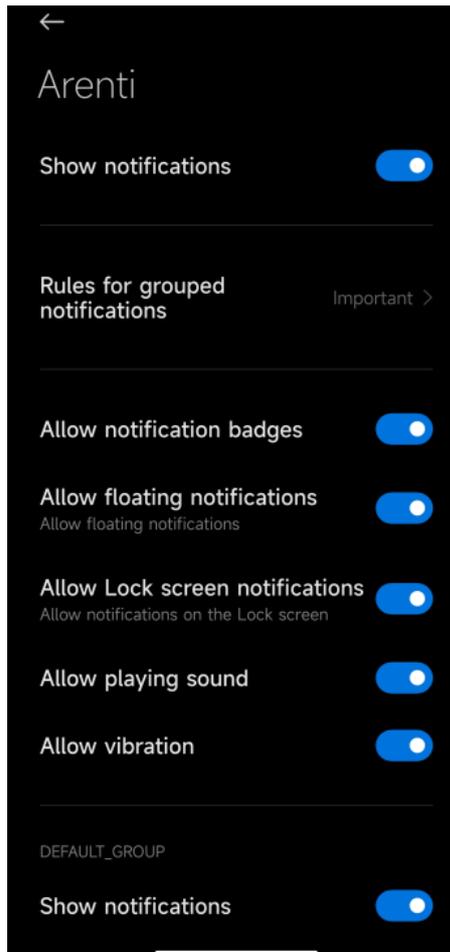

Set up Push notifications

1. Go to camera live video page- Settings-Alert Settings-Receive Alert Notifications: Enable

Your mobile phone will receive the Alarm notification when camera detect the motion/noise.

2. Set your phone to allow Arenti App to send push notifications. Go to your phone Settings, find Notifications and among the App list find the Arenti App. Make sure the mobile phone allow the Arenti App send notifications.
Mobile phone-Settings-Notifications-APP notifications-Arenti APP

5. Recording and Playback

Micro SD card Recording

With an Micro SD card inserted the camera can save motion alarm recordings or continuous recordings to the Micro SD card.

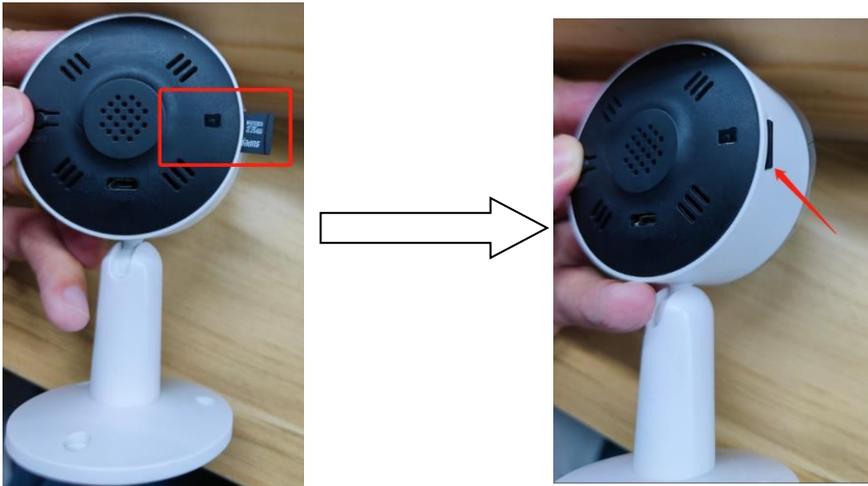

Choose a suitable SD card

1. Recommend SD card spec: Class 10 and above, Format FAT32, 2G-128G, brand Micro SD Card
2. Choose the SD Card Capacity
Example : 32GB SD card with 1080P camera
Full-Day recording: around 4 days
Event recording (3min for one event,20events per day):around 4 months
Note: When full,Camera will overwrite the oldest recordings.

Insert the Micro SD card

Move the camera Lens up push the Micro SD card in until it's locked or you hear a 'Click

'sound.

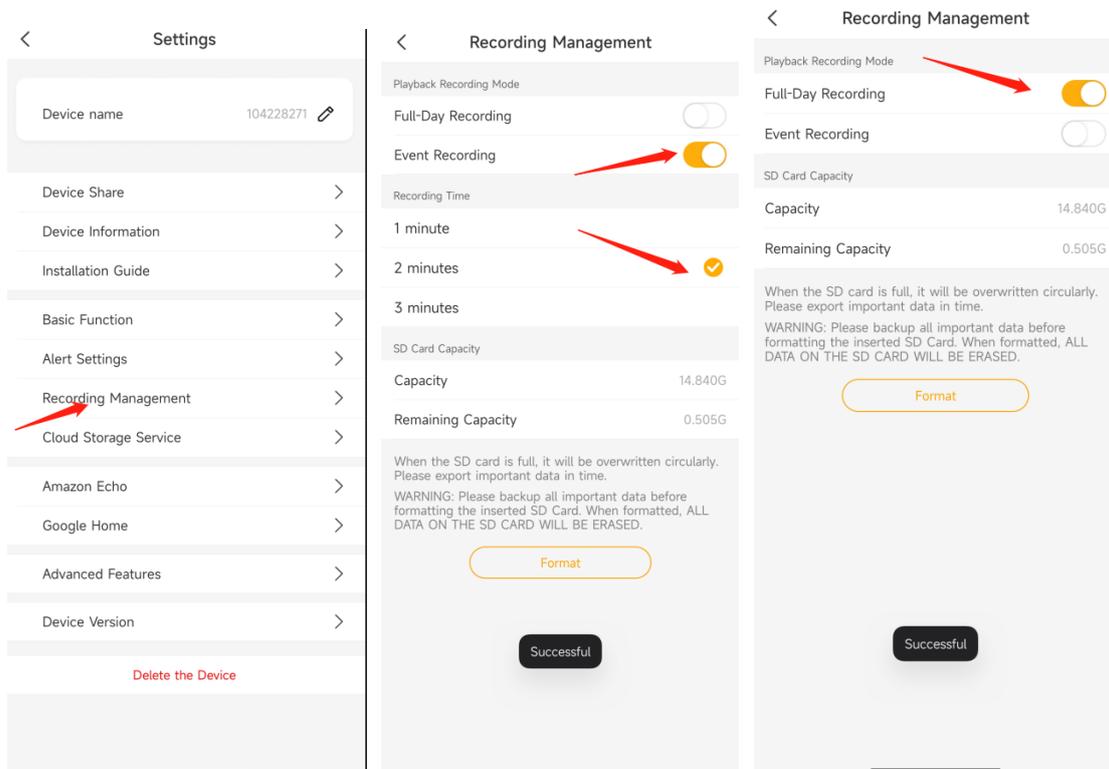

Set Recording(Micro SD card)

1. Event recording: Arenti APP-Device(tap device to live video page)-Settings-Recording Management- Event recording-Choose the Recording time-1/2/3 minutes

8. FAQ and Troubleshooting

FAQS

1. How to switch/change WiFi, update wifi password for device?

1. Delete the devices in your account in Arenti APP device list.(All recordings/subscription will be there, until you add it again)
2. Open APP click 'Add', and follow the steps use the new WIFI network to add the camera again.—Scan the qrcode when indicator is red flashing slowly.

2. What to do if I can't receive alert push notification?

1. Please ensure the Motion/Noise Detection: Arenti APP-Device(Tap device to live video page)-Settings-Alert settings, and Receive Alert Notification is enabled: Arenti APP-Device(Tap device to live video page)-Settings.
2. Please ensure the Message service resident (Arenti APP-Me-Settings) is enabled. The APP will Automatically run in the background to facilitate receiving visitor calls and alarm messages.
3. Please ensure notification for Arenti app has been enabled in phone setting. enter the phone system settings-notifications-find "Arenti" and enable notification permissions.
4. If you are using Android mobile phone, if you kill the APP, it will stop to receive the notification. Please confirm the APP is running there

3. Whether support viewing the SD card video via the computer?

Yes, It is supported.

1. Using the Micro SD card reader. Let the computer read the SD card.
2. You will find the video file in the SD card. It is an MP4 file, you could open and view the video on the computer directly.

4. How to delete /erase the video record in Micro-SD Card and Cloud storage?

SD card record: need you format the SD card and delete all recordings:APP-Device(tap to live video page)-Settings-Recording Management-Format SD card. Also you can use the SD card reader to connect the Micro-SD card with your computer, choose the file and delete it.

Cloud video record: it will be overwriting/deleted automatically after 3/7/30days depends on which service you subscribed. We have 3/7/30days looping cloud storage service.

5. Why the night vision image has a big reflection on window/glass?

When night vision is on, the infrared light will turn on also--to get clear image in the night. It will be very clear in the open area. If faced the glass, the infrared light will reflect off the glass, making bad image in night. If want to face the glass in the night, suggest turn off Night vision.

Troubleshooting

1. **Recognized the QR code successfully, but device fails to setup, and camera indicator shows red fast flashing:**

Your steps are all correct, maybe has some compatible issue with the wifi router.

1. Please try to confirm: wifi is 2.4GHz, not WPA3 security mode., password is correct, not contain special characters such as \';

2. Please put your device next to the router when set up. If this still does not work, please reboot your router (unplug for 10 minutes and plug in again) and reset your device to try again. Also, you can try to use another mobile/laptop as a hotspot to set up your device to test if it works with hotspot Wi-Fi. If it does not work with the hotspot, please connect us.

2. **Why my camera always offline/ lose connection?**

Network problems may cause the camera off-line. Solution:

- a) Check whether the power of the camera is sufficient.
- b) It is recommended that the wifi signal strength to be above 75%. Check from APP-Device (tap device to live video page)-Settings-Device information
- c) Restart the camera and router.
- d) Place the camera next to the router and observe whether the video is smooth. If the camera is still offline, it may be due to the camera hardware failure, please contact customer service

3. **My camera not working, after powering on/plug in ,there is no indicator light on.**

Please try to use the other adapter/cable and check again, if keep no light on, please send the camera SN and order number to support@arenti.com

4. **Why does the video always with the circle/buffering?**

The circle means that the video is loading, and the buffer and delay means that the network is not smooth. Please check whether the network connected between the camera and the mobile phone is smooth. It is recommended to place the camera close to the WIFI router.

5. **I already inserted the Micro SD Card Why APP keep shows "No SD card"?**

It means that the SD card identification fails or broken. Suggestions:

- a) Please use a brand SD card, high speed(Class 10 and above).
- b) The SD card can be identified by the computer normally.
- c) Only FAT32 format is supported. capacity between 2G-128G.
- d) It is recommended to try another SD card.

It may take some time for the camera to identify the SD card. After inserting the card, wait for about 30S and then observe.

6. **I got the alarm notifications, tap to check the video but failed to play.**

Please check it few mins later. Because the video may still in uploading to the cloud storage/Saving to SD card.
